Mid-term Project: The Topic

The project web-page will implement all the techniques that have been introduced in class throughout the semester so far. The topic of the web page will be human history, including the origins of humans and the great revolutions of human society. The project will consist of three web pages all linked together by a menu bar fixed to the top of the screen on all three pages. There will be a landing page along with two content pages. The landing page will be an introduction with a large image and a short paragraph element. The first content page will be about the human revolutions. The next content page will be about the different species of humans in the genus Homo.

First, the landing page will consist of a centered image of Lucy, the oldest human fossil. This will set the tone for the rest of the website as a website for the origins of humans and their progression throughout history. Lucy was a fossil found in Ethiopia in 1967 and was the oldest found fossil of human ancestor at the time and for a long time after. Under the image of Lucy there will be a short paragraph element to introduce users to the site and explain the purpose of the website. The image and paragraph element will be centered.

The first content page will be labeled History and will be composed of the three great revolutions that changed human history. The three revolutions are the Cognitive Revolution, the Agricultural Revolution, and the Scientific Revolution. The page will be made of three sections, for each revolution, separated by different background colors. For each section there will be three different cards with information on each revolution.

The last content page will be named Species and will include the different species of humans that have existed in history. The species will be shown by responsive cards. The front of the cards will show the name and an image of the species. The back of the card will list additional information of the species.

Responsiveness of the webpage will be implemented on every page. Every page will have a responsive hamburger menu at the top of the page. The hamburger menu will include links to all three pages. The landing page will have a centered image and paragraph element with display flex properties. The content pages will both have flex containers that will change with the screen width. For a professional finish there will be a personal favicon, a footer, and a color scheme to make the pages flow well.

Project Topic	Human History
Landing Page Content	- Header

	<ul style="list-style-type: none"> - Lucy, the first human fossil - Lifelike reproduction - Menu bar: Home, Human Revolutions, Different Types of Humans
Content Page #1	<ul style="list-style-type: none"> - Human Revolutions - List 3 different sections: Cognitive Revolution, Agricultural Revolution, Scientific Revolution - Information about each revolution will be displayed in cards - Each section will include information on time period, economical effect, and psychological effect
Content Page #2	<ul style="list-style-type: none"> - Types of humans - Cards: Homo Sapiens, Neanderthals, Homo Rudolfensis - Each card will have information of each species on the back
Responsiveness	<ul style="list-style-type: none"> - Landing page, image will resize at different breakpoints - Hamburger menu - Flex containers will respond along with screen width
Professional Finish	<ul style="list-style-type: none"> - Personal favicon - Color scheme that harmonizes - Footer
